SUMMARY

Final-year Computer Science undergraduate targeting an entry-level Cybersecurity Analyst role across security testing and cyber defense. Hands-on experience auditing web services and simulated targets for exploitable flaws, inspecting host activity and audit logs for unauthorized access, and automating checks and reporting.

EDUCATION

B.Tech in Computer Science and Engineering (Cybersecurity) Expected 2027
St. Vincent Pallotti College of Engineering, Nagpur, Maharashtra

Higher Secondary School Certificate (HSSC) Feb 2023
Vidarbha Buniyadi College, Nagpur, Maharashtra

SKILLS

Languages: Python, Golang, C, Java, SQL, Bash, JavaScript, HTML/CSS
Detection & Monitoring: SIEM (Wazuh, Splunk), Sysmon, Windows/Linux Event Logs, MITRE ATT&CK
Response & Forensics: Alert Triage, Incident Response, Log Forensics, Evidence Integrity
Offensive Security: Vulnerability Assessment (VAPT), Web & API Security, Network Pentesting
Networking & Systems: TCP/IP, Network Security, Packet Analysis, Linux (RHEL), Firewalls
Tools & Frameworks: Burp Suite, Wireshark, Nmap, Metasploit, Gobuster, Nessus, FastAPI, Flask, Docker, Git

EXPERIENCE

Cybersecurity Intern, ASTRA Lab, IIT Madras Oct 2026 – Present
- Built an isolated virtualization sandbox running Sysmon to capture endpoint telemetry and evaluate host detection against simulated process injections.
- Configured test harnesses to simulate process hollowing and memory injection techniques, documenting baseline behavioral patterns.
- Developed an automated Python pipeline normalizing raw Windows and Linux event logs into structured JSON schemas for anomaly triage.

Cybersecurity Intern, ShadowFox Jun – Jul 2025
- Conducted network reconnaissance, port scanning, and service enumeration with Nmap, and identified hidden web directories using Gobuster.
- Deployed Metasploit reverse shell payloads across lab environments, escalated Linux privileges via SSH private keys, and intercepted plaintext HTTP credentials in Wireshark.
- Executed wireless testing via Wi-Fi deauthentication attacks to capture WPA handshakes; authored structured pentest reports with remediation guidance.

PROJECTS

ThreatFusion AI: CTI Platform Using Graph Memory *JIES Journal (DOI)*
Built an automated security triage pipeline (Team of 5 capstone) in Python and FastAPI that normalizes raw telemetry into vendor-neutral OCSF and STIX 2.1 standards. Designed a Neo4j knowledge graph to correlate incident indicators across multi-hop attack paths, backed by deterministic rule guardrails. Awarded **Best Project Award** (Institute Level, 2026–27); copyright filed.

Portable Log Analysis Tool for Isolated Networks
Developed for the NTRO Smart India Hackathon (SIH) problem statement to analyze security logs in simulated air-gapped environments without external connectivity. Implemented tamper-resistant evidence collection protocols to preserve cryptographic evidence integrity and forensic chain-of-custody; **Awarded 2nd Prize** at the Engineers Day Project Showcase.

CREDENTIALS & ACHIEVEMENTS

Certified API Security Analyst (CASA) – APISec University Apr 2026
Certified in Cybersecurity (CC) – ISC2 May 2025
Red Hat Academy (RH134) – Red Hat Feb 2026
Cryptography & Network Security (CNS) – NPTEL Apr 2025
3rd Place, CTF Competition – International Cyber Summit (ICYS) Oct 2025

EXTRACURRICULAR ACTIVITIES

- **Seasides InfoSec 2K26:** Attended technical workshops on exploit writing, Active Directory, and AI agent security.
- **EncipherX 4.0:** Authored CTF challenges across Android exploitation and reverse engineering for 150+ teams.
- **Web3 Hackathon 2025:** Organized event and conducted a workshop on blockchain fundamentals for 100+ attendees.
- **Phoenix Cybersecurity Forum:** Member participating in red team labs; active on TryHackMe and HackTheBox.
